3. Product Description

RSIC-DC04 HD

The RSIC-DC04 HD is designed for use with any concrete, steel or wood frame where noise control is needed. The RSIC-DC04 HD assembly decouples and isolates the framing, gypsum board or sheet goods from the structure increasing the acoustical performance of the system.

The RSIC-DC04 HD stops the noise and vibrations that typically would be allowed to transfer through the structure.

Materials and Composition

The 16 gauge RSIC-DC04 HD clips are composed of galvanized or protective coating.

The RSIC rubber isolators are made of proprietary rubber and/or manufactured rubber compounds.

The RSIC-DC04 HD assembly is distributed from Canby, OR.

RSIC-DC04 HD

Sizes and Weight-bearing Information:

The RSIC-DC04 HD has an acoustical design load rating of 72 pounds per isolator. The RSIC-DC04 HD clip can support up to two layers of 5/8 inch gypsum board when spaced at 48 x 48 inches on center.

For heavier systems increase the number of isolators to support the additional weight of the system. The RSIC-DC04 HD clip fastens to the structure with a wood screw, steel screw, concrete screw or other fasteners that fit through the center ferrule. The RSIC-DC04 HD allows for a wide variety of systems and isolation with no restriction to cavity depth or framing designs.

Product Limitations:

For interior use only with operating temperatures of 40–100 degrees F (4.4–37.8 degrees C).

5. Installation

General installation: follow manufacturer's specific installation instructions.

- Install resilient sound isolation clips and supporting added items in accordance with manufacturer's instructions
- Mechanically fasten RSIC-DC04 HD to structure with screws typically. Follow local guidelines for the attachment guide.
- Space resilient sound isolation clips at maximum of 48 x 48 inches (1200 x 1200 mm) on center for ceilings
- Do not exceed design load (pull and shear) of 72 pounds per isolation clip
- Attach framing or gypsum board support system to RSIC-DC04 HD. A frame or wire hung system using hanger wire, or a direct attached wood or steel stud framing.

Flanking Noise:

- Review installation details to prevent structure-borne flanking noise
- Do not allow isolated framing or gypsum board to contact foreign materials such as other ceilings or wall framing members.
- Install gypsum board in perpendicular to the supported framing member with a 1/4 inch (6 mm) gap around the perimeter of the ceiling for acoustical sealant application.
- Install gypsum board in accordance with ASTM C840 as specified in Section 09250

Acoustical Sealant:

- Seal potential air leaks with acoustical sealant to achieve best Field Sound Transmission Class (FSTC)

- Seal electrical outlets and penetrations with acoustical sealant
- Apply fire-rated acoustical sealant at locations where fire-rated assembly is required
- Putty Pad Sealant: acoustically seal with putty pads, electrical boxes in ceilings in which resilient sound isolation clips are used
