

## LONGFELLOW HOTEL PORTLAND, MAINE

### PRODUCT

### OVERVIEW

The PAC-RCB clips we used in construction of the Longfellow Hotel in order to provide strategic blocking of wall sections where bed headboards will be mounted. In doing so, you are taking a proactive approach to significantly reduce sound transmission. The PAC-RCB clips, with their innovative design and exceptional sound-dampening properties, act as a vital barrier against unwanted noise intrusion. Your decision to incorporate these clips ensures that the wall next to the bed becomes an uninterrupted oasis.

### PROJECT DETAILS

five story, 48 rooms (44 king rooms and four suites), several rooms include French balconies and bay windows, sauna, massage, mediation experiences, halo therapy, and harmonic sleep loungers
